PROFESSIONAL SUMMARY

First-year Computer Engineering student at UADE, learning backend development. I code in Java and Python and work with SQL databases. I design and direct SimpleStock, a point-of-sale system for convenience stores built with Java and Spring Boot and running in a real pilot shop, and I've built end-to-end data projects, including an automated pipeline that consumes a REST API and persists data in SQLite. Interested in AI and machine learning as a next step. Seeking a first trainee or junior opportunity in backend development.

TECHNICAL SKILLS

Languages: Java, Python, SQL, TypeScript

Databases: SQLite, SQL

Frameworks and libraries: Spring Boot, React, Requests, Pandas, Streamlit, Matplotlib

Tools: Git, GitHub, Jupyter Notebook, Excel, Power BI

Currently learning: Backend development, REST APIs · **Interests:** AI and Machine Learning

PROJECTS

SimpleStock · Point-of-sale and inventory system for convenience stores

Java · Spring Boot · SQLite · React · TypeScript | 2026 – In development (v0.5)

- Commercial product installed on the shop's PC and used from the browser, including from other registers on the local network. Real pilot shop. Designed and directed by me, using AI as an implementation tool.
- Layered backend with a test that enforces dependencies and Flyway migrations. Money as integer cents, amounts computed on the server, idempotent sales, immutable records and a hash-chained audit log.
- 900+ automated tests, including concurrency, idempotency and migrations. Installer, signed license and backups.

simplestockpos.com.ar (private code, available to show in an interview)

Olist E-Commerce Analysis

Python · Pandas · Matplotlib · Jupyter | 2026

- Performed exploratory data analysis (EDA) on 99,000+ orders from Brazilian e-commerce platform Olist (2016–2018).

github.com/Tonxt/olist-ecommerce-analysis

Argentina Dólar Tracker

Python · Requests · SQLite · Streamlit | 2026

- Automated Python pipeline that consumes a public REST API (DolarAPI) with Requests and extracts 7 daily USD exchange rates (official, blue, MEP, CCL, crypto, wholesale, and card).
- Public website with live rates and history (tonxt.github.io/argentina-dolar-tracker), Streamlit dashboard, and automated daily execution via Windows Task Scheduler.

github.com/Tonxt/argentina-dolar-tracker

Python Programming Competition – UADE

Python | 2026

- Developed solutions in a team-based, time-constrained programming competition.

EDUCATION

Computer Engineering (Ingeniería Informática)

UADE – Universidad Argentina de la Empresa | 2026 – Present

First year in progress. Relevant coursework: Programming, Data Structures, Mathematics, Statistics, Databases.
